

# CHEVROLET COLORADO SS

## CHEVROLET COLORADO SS

In the hallowed tradition of SS-badged Chevrolets such as the Chevelle, Camaro, and awesome 1990-93 454 SS Sport Truck, the Colorado SS show vehicle sets a new benchmark for road-going performance. The Colorado SS launches with 400 horsepower from the 2005 Corvette's LS2 and then benefits from a complete package of high-performance features.

Design details include:

- Lowered suspension
- Brushed nickel-plated 20-inch Silverado SS rims
- Stylized interior with unique trim, bezels, and seats
- Heavy-duty 4L70-E four-speed automatic transmission with floor shifter
- Custom exterior package with unique grille, fascias, flares, rocker extensions and tonneau cover
- Heavy-duty 9.5-inch rear axle with a locking differential for added traction and a short 3.73:1 rear axle ratio for rapid acceleration
- LS2 6.0L V-8 with 400 horsepower and 400 lb.-ft. torque that exhales through a custom built performance exhaust from the catalyst rearward
- Front disc brakes measuring over 12 inches that are sourced from the full-size Chevrolet Silverado; rear disc brakes from the Chevrolet TrailBlazer.
