## ***Chevrolet Panel HHR SS Turbo***

### ***CHEVY HHR PANEL SS CONCEPT PREVIEW LIMITED-EDITION PRODUCTION MODEL***

***The Panel SS fuses the production HHR SS's turbocharged powertrain and race track-bred suspension with the unique HHR Panel body style. The HHR Panel SS concept combines production components with custom details. And while the concept vehicle will be shown at events around the country, the HHR Panel SS limited-edition production model will be offered at Chevy dealers starting in the 2009 model year. The underpinnings and powertrain of the HHR Panel SS concept include the production turbocharged and intercooled 2.0L Ecotec engine that produces 260 horsepower (194 kW), unique exterior styling and an SS-specific interior: SS-embroidered sport seats – with suede-like Ultra Lux inserts – a new gauge cluster with 140-mph speedometer, an A-pillar boost gauge and a new, driver-oriented steering wheel support the vehicle's performance capability. The cargo area – there is no rear seat – has been customized with billet aluminum tie-downs, floor strips and load brackets. Underneath, a tuned suspension based on the production SS's FE5 Sport suspension enables sharp ride and handling. The FE5 suspension was developed and tuned at Germany's famed Nürburgring racing circuit and includes specific stabilizer bars, spring rates and damper tuning – all designed to complement the turbocharged powertrain. Along with its high-performance attributes, the HHR SS is equipped with a host of safety and convenience features, including the StabiliTrak vehicle stability control system and four-wheel disc brakes with ABS. Vehicle highlights:***

- 2.0L Ecotec turbocharged and intercooled DOHC engine with 260 horsepower***
- Electronically controlled automatic transmission***
- HHR SS FE5 Sport suspension • Enhanced brake system***
- Production HHR Panel body with production and modified HHR SS exterior panels***
