

**PONTIAC G6 GXP**

# VEHICLE SPECIFICATIONS

## **PONTIAC G6 GXP**

*Pontiac unveiled a G6 GXP show vehicle, hinting at a possible high-performance direction for the new sports sedan. The G6 GXP concept is powered by a 3.6-liter HO V-6 producing 275 horsepower and backed by a close-ratio six-speed manual transmission. Although just a concept, the G6 GXP will be used to gauge opinions about the viability of a high performance version of the new G6. Similar clinic testing with the Bonneville GXP and Grand Prix GXP concepts resulted in green lights for production. The Bonneville GXP now accounts for about 30 percent of all Bonneville sales and the Grand Prix GXP is scheduled to start production in 2005.*

*The G6 GXP show vehicle is instantly identified by its aggressive appearance, with new front and rear fascias that give the vehicle a “tightly wrapped” look. The vehicle’s performance appearance is accented by a lowered ride height, which settles the G6 GXP body over a set of chromed 18-inch wheels and performance tires.*

### **Design details include:**

- Bilstein shocks**
- Styled outpost strobe lamps**
- GXP-signature chromed grille trim**
- F40 six-speed manual transmission**
- 3.6-liter HO V-6 with 275 horsepower**
- Chromed production wheels and performance tires**
- GXP-specific front and rear fascias, rocker moldings**
- GM Performance Parts “cat-back” exhaust with bright tips**
