

**PONTIAC SOLSTICE  
WEEKEND CLUB RAGER**

## **PONTIAC SOLSTICE WEEKEND CLUB RACER**

***Pontiac's exciting new 2006 Solstice roadster is an exhilarating performance vehicle with the DNA of a pure sports car. A car this athletic is a natural candidate for the weekend amateur racer. GM Performance Division built the Solstice Weekend Club Racer concept to showcase how a racing version of the car might be configured.***

***This aggressive package would allow Solstice owners to compete in amateur track events with a minimum of upgrades. By competing in sanctioned, off-highway amateur events, Solstice owners can enjoy spirited driving in a safe environment – and the special components of the Weekend Club Racer concept would let them experience the car's maximum performance. The most noticeable changes are external, starting with a removable hard top. The concept top makes a bold styling statement and transforms the Solstice into an enclosed car, which is what many amateur and professional racing classes demand. A new larger rear wing dominates the view most competitors will see – the tail of the Solstice. Front and rear fascias were modified, and new rocker panels, complete with molded-in rear brake cooling ducts, were fabricated. An air extractor-style hood helps keep the engine compartment cool. Aggressive five-spoke, 18-inch alloy wheels and matching tires – Goodyear Eagle F1 255/45ZR18's – aid both performance and eye appeal. The whole package sports a custom bronze paint job. Power comes from a turbocharged 2.0L four-cylinder engine rated at 325 horsepower (242 kw). A cat-back performance exhaust system enhances engine performance and provides a sporty exhaust note. A T-2 race suspension package was added, along with larger diameter disc brakes.***
